

Potomac's Conquer Risk Defensive Bull (CRDBX)

As of March 31, 2024

FUND OVERVIEW:

The Conquer Risk Defensive Bull Fund employs a rules-based investment strategy. If the Advisor's algorithmic composites point to a rising market, the Fund will invest in ETFs that provide leveraged exposure of a particular market index, such as the S&P® 500 Index. During downward trending markets, the fund will attempt to reduce downside exposure by limiting the Fund's investments to cash. The Fund may also invest in fixed income securities with longer maturities. If the trend is weak enough the Fund's assets may be invested in ETFs that provide inverse exposure of a particular market index, such as the S&P® 500 Index.

Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than performance shown. You may obtain performance data current to the most recent month end by calling 1-888-774-6679.

CONQUER RISK DEFENSIVE BULL FUND

The Value of a \$10,000 Investment in the Conquer Risk Defensive Bull Fund from July 1, 2020 to March 31, 2024.

The Growth of \$10,000 graph shows a fund's performance based on how \$10,000 invested in the fund would have grown over time with dividends reinvested.

Potomac's Conquer Risk Defensive Bull (CRDBX)

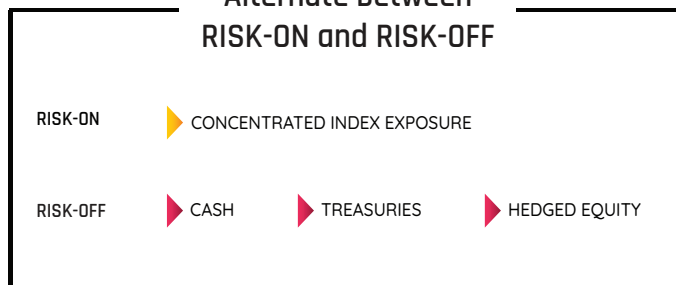

As of March 31, 2024

KEY FEATURES

Investment decisions are made based on mathematical formulas and market tested indicators to:

- Identify times when it is most advantageous to be invested in the equity market
- Employ the strategic use of leverage
- Manage risk
- Maintain a lower correlation to traditional equity benchmarks

Alternate between RISK-ON and RISK-OFF

FUND DISCLOSURES

Investors should consider the investment objectives, risks, charges and expenses of the Funds carefully before investing. The prospectus contains this and other information about the Funds. You may obtain a prospectus on this website or by calling the transfer agent at 1-888-774-6679. The prospectus should be read carefully before investing.

An investment in the Funds is subject to investment risks, including the possible loss of the principal amount invested. There can be no assurance that the Funds will be successful in meeting their objectives. The risks associated with the Funds, detailed in the Prospectus, include the risks of investing in exchange traded funds (ETFs). To the extent a Fund invests in ETFs and mutual funds, the Fund will indirectly bear its proportionate share of any expenses (such as operating expenses and advisory fees) that may be paid by the underlying funds. These expenses would be in addition to the advisory fee and other expenses that the Fund bears in connection with its own operations. Investment in an exchange traded fund (ETF) carries security specific risk and the market risk. Overall stock market risks may affect the value of the Funds. These risks include the financial risk of selecting securities that do not perform as anticipated, the risk that the stock markets in which the Funds invests may experience periods of turbulence and instability, and the general risk that domestic and global economies may go through periods of decline and cyclical change. There also may be risks associated with the Funds' investment in a specific sector, and non-diversification. The Funds may also engage in short-term trading to try to achieve its objective and may have portfolio turnover rates significantly in excess of 100%. Leveraged ETF Risks - The net asset value and market price of leveraged ETFs are usually more volatile than the value of the tracked index or of other ETFs that do not use leverage. Inverse ETF Risks - Inverse ETFs seek investment results that are the opposite of the daily performance of an underlying index or basket of stocks. Investors will lose money when the Index rises - a result that is the opposite from traditional funds. The Funds may invest in underlying funds that hold fixed income securities and foreign securities. Fixed income securities fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities. Foreign investments can involve significant risks in addition to the risks inherent in U.S. investments. These risks include adverse political, social and economic developments, differing auditing and legal standards, war, expropriation and nationalization.

S&P 500 measures performance of large cap U.S. equities. It is a market-value-weighted index of 500 stocks. The weightings make each company's influence on the Index performance tied proportionately to market value of the company. It is not possible to directly invest in an unmanaged index.

The S&P Target Risk Aggressive Index is designed to measure the performance of aggressive stock-bond allocations to equities, seeking to maximize opportunities for long-term capital accumulation. It may include small allocations to fixed income to enhance portfolio efficiency. The index is made up of 80% equities and 20% fixed income.

IMPORTANT DEFINITIONS USED IN THIS REPORT

Beta: Beta is a measure of the Fund's volatility versus the benchmark.

Correlation: Correlation measures how a fund's return moves in relation to an index benchmark.
